PROFILE

I'm Tarun Pradeep, a Cloud Engineer focused on infrastructure, automation, secure delivery, and operational reliability across AWS, Azure, Linux, Docker, and Jenkins. I care about reliability, security, clear documentation, and understanding why a system works, not merely getting it to run once.

SKILLS

Cloud platforms	AWS EC2, AWS S3, AWS IAM, AWS VPC, AWS ALB, AWS Auto Scaling, AWS RDS, AWS Route 53, AWS Elastic Beanstalk, AWS Lambda, AWS API Gateway, AWS DynamoDB, AWS CloudWatch, AWS SNS, AWS CodePipeline, AWS CodeCommit, Microsoft Azure administration
DevOps and delivery	Jenkins, GitHub Actions, Docker, Docker Compose, Git and GitHub, CI/CD pipeline design, Trivy image scanning, Nginx, PM2
Systems and networking	Linux and Ubuntu administration, Windows administration, DNS, DHCP, and Active Directory Services, Router configuration, IP and MAC binding, FortiGate firewall, Office 365 and Google Workspace, Synology NAS, Virtualization, Level-2 network support
Application and data	Node.js and Express deployment, Python application deployment, MySQL and MSSQL, React, Vite, and Tailwind CSS, Kubernetes fundamentals (kind)
Engineering practice	Monitoring and logging, Incident troubleshooting, Security policy documentation, Data migration, Backup and recovery workflows, Technical reporting and documentation

EXPERIENCE

Cloud Engineer / System Administrator · **Vaata Smart Private Limited** — February 2024 - May 2026

- Resolved complex hardware and software issues, with 99% issue resolution within SLA timelines.
- Led a Google Workspace migration to improve collaboration and productivity.
- Configured and maintained printers and networks to reduce operational disruption.
- Drafted and enforced IT security policies.
- Conducted staff training to improve technology adoption.
- Worked with Amazon S3 Glacier storage and CloudBerry Explorer for backup file upload and download workflows.

Associate Systems Engineer · **Precision / SportsMechanics** — September 2021 - February 2023

- Monitored system resource availability, troubleshot user accounts and system access, issued case tickets, and supported developers implementing internal systems.
- Provided emergency on-call support for network maintenance, system upgrades, service packs, patches, hot fixes, and security configurations after reviewing system and application logs.
- Installed and troubleshot hardware including SMPS, RAM, HDD, motherboards, processors, and operating systems.
- Configured Windows services and infrastructure including DNS, DHCP, and Active Directory Services.
- Configured router IP and MAC binding to mitigate ARP spoofing and prevent unauthorized devices from accessing the network.

SELECTED PROJECTS

Container Delivery with Amazon ECR, IAM Roles and Jenkins

A Java 21 service built with Maven, shipped as versioned Docker images through a private Amazon ECR registry, deployed to a second EC2 host with a pull-only IAM role, and published by a parameterised Jenkins pipeline. Images 1.0 and 1.1 pushed manually, 1.1 pulled and running on a separate EC2 host, scan-on-push producing real findings (4 critical, 27 high on 1.1), a keep-latest-5 lifecycle policy, and Jenkins building and pushing 1.2 end to end.

Java 21 · Maven · Docker · Amazon ECR · AWS IAM · AWS EC2 · AWS CLI · Jenkins

SonarQube Quality Gates in Jenkins for Python and Node.js

Two CI pipelines - Python (pytest) and Node.js (Jest) - that test, measure coverage, run SonarQube analysis and only build and run the Docker image when the Quality Gate passes. Both pipelines implemented end to end: tests, coverage, SonarQube analysis, webhook-driven Quality Gate, and Docker build/run only after a passing gate - demonstrated with both PASS and FAIL runs.

Jenkins · SonarQube · SonarScanner CLI · Python · pytest · Node.js · Jest · Docker · AWS EC2

Project Aurora: Containerised Application on AWS EC2
A React/Vite frontend and supporting services, containerised with multi-stage Docker builds and deployed to AWS EC2. A repeatable container-based deployment on EC2, verified end to end from build through redeployment.
React · Vite · Docker · Docker Compose · Nginx · MySQL · AWS EC2

Secure AWS Production Architecture
An IAM, VPC, load-balanced compute, and RDS architecture designed around least privilege, tiered network access, and monitored recovery. A documented, security-and-recovery-aware AWS architecture with monitoring wired through to alerting.
AWS IAM · AWS VPC · Application Load Balancer · Amazon RDS · CloudWatch · SNS

Distributed Jenkins Controller and Linux Build Agent
Jenkins on Ubuntu with a dedicated Linux build agent connected over SSH, separating orchestration from build execution. Orchestration and build execution running on separate hosts, improving maintainability and giving a path to scale build capacity independently of the controller.
Jenkins · Ubuntu · SSH

Node.js Authentication Application with MySQL and Amazon RDS
A Node.js/Express app on Ubuntu EC2 with bcrypt-hashed authentication against MySQL on Amazon RDS, managed by PM2. A working authentication application deployed and process-managed on EC2 against a managed RDS database.
Node.js · Express · MySQL · Amazon RDS · bcrypt · PM2 · AWS EC2

Jenkins EC2 Control and Multi-Agent Pipelines
A parameterised Jenkins pipeline that starts, stops or restarts the DEV, QA or PROD EC2 instance through the AWS CLI, plus a pipeline that routes Docker and Maven work to dedicated, label-matched agents. EC2 instances controlled per environment through Build with Parameters, and a multi-agent pipeline that ran each stage on the right agent: docker-agent = SUCCESS, maven-agent = SUCCESS.
Jenkins · AWS CLI · AWS EC2 · AWS IAM · Docker · Maven · Java 21 · SSH

Parameterised CI/CD for a Spring Boot Service
One Jenkins pipeline that uses every parameter type - image tag, branch, run-tests and run-container switches, and target environment - to build a Spring Boot app and deploy it to DEV, QA or PROD. Four documented runs: dev-v1 from master to DEV with tests, qa-v2 from develop to QA with tests skipped, prod-v3 from release to PROD, and no-container-v4 building the image without deploying.
Jenkins · Spring Boot · Java 17 · Maven · Docker · Git · AWS EC2

Deploying This Portfolio with Jenkins and Docker
A Jenkins pipeline on EC2 that checks out this portfolio, builds it with its own multi-stage Dockerfile, replaces the running container and verifies the site responds. A one-click Jenkins deployment: new image built, previous container replaced, and the portfolio serving from the EC2 host on port 8085.
Jenkins · Docker · Next.js · Node.js · GitHub · AWS EC2

EDUCATION

Bachelor of Technology in Information Technology
Sri Ramanujar Engineering College, Chennai · June 2025

Diploma in Electronics and Communications
IRT Polytechnic College, Chennai · October 2021

CERTIFICATIONS

- Microsoft Certified: Azure Administrator Associate (June 2026)
- Google IT Support Certificate
- Accenture Technology Consulting Virtual Experience Certificate
- IBM Cognitive Class Certificate
- Linux & Python Module for Cloud & DevOps
- CCNA Network Essentials Course Student Certificate
- Server Application & Virtualization Module for Cloud & DevOps
- Data Migration & Resilience Module for Cloud & DevOps (March 2026)
